enumerate Releases Numerator! Publish 1.5

New Software Offers The Best Way to Present Numerical Data

McLean, VA. – January 6, 2003 – Software developer enumerate Solutions Inc. today announced it has released Numerator! Publish 1.5, an enhanced software package for presenting numerical data. The software allows business and technical users alike to easily create interactive data views (IDVs) and post them to their Web sites or intranets. Visitors to these sites access the IDVs from a standard Web browser, and can instantly perform analysis without having to format the data or download it into a spreadsheet. They carry out analysis by clicking their mouse to create custom charts, perform calculations on the data, and drill-down to the specific data they want to compare.

“The software is ideal for corporate investor relations departments and other organizations that present numerical data, especially financial institutions and industry associations,” said J. Paul Carey, chief executive officer of enumerate. “Numerator! Publish makes their data more accessible, dramatically improves the transparency of their data, broadens their base of potential users, and allows their users to reach critical business decisions faster. Best of all,” he added, “with Numerator! Publish 1.5, most data providers can begin posting interactive data on their sites less than a few hours.”

Features of Numerator! Publish 1.5

- Numerator! Publish 1.5 accepts data from Microsoft Excel, delimited text files, and a variety of database formats for instant conversion into interactive format. The Import wizard guides data providers through importing and organizing their data for effective online presentation.
- The IDV Designer allows data providers to easily create attractive charts and tables with full analytical capabilities. Data providers have full control over what capabilities they make available to end-users and can choose from dozens of features for their IDVs. Publishers can select one-click calculations for adjusting their data, such as incremental percent change, cumulative percent change, average, median, normalize, standard deviation, and sort. Providers can also create custom reports that highlight key features of their data.
- The software’s IDV Publisher allows providers to post IDVs online without having access to an advanced IT department. Once online, end-users can access the IDVs from a standard Web browser -- no additional software is required. Publishers have the option to allow their end-users to download the charts and tables they build, along with the data itself, for use in presentations.

About enumerate

Based in Northern Virginia, enumerate develops and markets software for presenting numerical data in an interactive format. enumerate's core product, Numerator! Publish enables business users to easily publish reports from a variety of different data sources for both internal corporate use and external communication. The interactive reports enable end-users to instantly analyze the data and make critical business decisions. For additional information about enumerate products, call 703.448.0087 or visit www.enumerate.com.
