

enumerate Releases Numerator!Publish™ 1.6

Upgrade Provides Additional Presentation Capabilities and Further Streamlines the IDV Creation Process

McLean, VA. (March 4, 2003) – Software developer enumerate today announced it has released Numerator!Publish 1.6, an enhanced software package for presenting numeric data. The software allows business and technical users alike to easily create Interactive Data Views (IDVs) and post them to their Web sites or intranets. Users can perform analysis using a standard Web browser, clicking their mouse to create custom charts, do calculations, and drill-down to the specific data they want to compare.

“With this latest release, we continue to respond to our users requests for additional interactive presentation capabilities for their business and financial reports. We also strengthen our commitment to seamlessly integrate with all the standard data formats,” said J. Paul Carey, CEO of enumerate. “This takes us one step closer to our goal of becoming the standard for presenting data online,” he added.

Key new features of Numerator!Publish 1.6 include:

- **Improved reports feature:** Numerator!Publish allows publishers to design reports within their IDVs to highlight key aspects of their data. With v1.6, reports can now be presented as a list of hyperlinks, in the tree control, or from a menu option in the file menu.
- **Hyperlinks:** Publishers can now add hyperlinks to data, linking to more information such as definitions, notes, footnotes or another IDV. For example, a public company presenting an interactive version of their 10k could link financial statement line items to the corresponding management discussion and analysis.
- **Improved IDV Designer Wizard Navigation:** The IDV Designer Wizard now features a tree to make it faster and easier to access individual wizard screens and update the look and feel of an IDV.
- **Easier Data Editing:** Numerator!Publish 1.6 contains several new ways to edit and work with data. Publishers can edit data and text directly in Numerator!Publish’s grid, change indent levels directly in the grid, use a full-fledged ‘find and replace’ on data or text, change row and column headers, change horizontal axis title, and add hotlinks to line items. Automatic error checking is included.

About enumerate

Based in Northern Virginia, enumerate develops and markets software for presenting numerical data in an interactive format. enumerate’s core product, Numerator!Publish enables business users to easily publish reports from a variety of different data sources for both internal corporate use and external communication. The interactive reports enable end-users to instantly analyze the data and make critical business decisions.
